FUEL CONSUMPTION X-GAUGE SETUP

Assuming you have set up your ScanGauge to display **km** and **litres**, the fuel consumption for the X-Gauges below will be shown in litres per hundred kilometres. (L/100 km)

- Start from the **HOME** screen, press **MORE>MORE>MORE>XGAUGE**
- Then in the top right, select the number of the X-Gauge memory you want to use (0 to 24)
- Next select **<EDIT** , this will take you to the **TXD** screen
- Use the **+** and **-** buttons to enter each character at the underscore position, the **→** button at the top right will move to the next character space.
- To display consumption for the current trip Enter **00** into the **TXD** screen and press **OK>** or,
To display consumption for all of todays trip Enter **01** into the **TXD** screen and press **OK>** or,
To display consumption for the previous days trip Enter **02** into the **TXD** screen and press **OK>** or,
To display consumption for current tank of fuel Enter **04** into the **TXD** screen and press **OK>**
- Enter **800000000000** in the **RXF** screen and press **OK>**
- Enter **0000** in the **RXD** screen and press **OK>**
- Enter **000000000000** in the **MTH** screen and press **OK>**
- Enter a suitable name in the **NAME** screen and when you are finished press **OK>**
Eg: L/100 km per: Current Trip = **LPC**, Todays trip = **LPD**, Previous days trip = **LPP**, Tank = **LPT**
- Lastly press **SAVE**.

Now you can select your new gauge just like any other one. From the home screen, press **GAUGE**, press the button next to the gauge you want to use for the X-Gauge. Keep pressing as needed until your newly created X-Gauge name appears.
